US labour productivity rose 3.6% in the third quarter

What the national figure does not show about one organisation

Source: US Bureau of Labor Statistics, Productivity and Costs, Third Quarter 2026, Preliminary, released 5 November 2026. Nonfarm business sector, seasonally adjusted annual rates.

What the release reports

3.6%	Labour productivity, annual rate
3.7%	Output
0.1%	Hours worked
53.0%	Labour share, the lowest level in a series that begins in 1947

Source: US Bureau of Labor Statistics, Productivity and Costs, Third Quarter 2026, Preliminary, released 5 November 2026. Nonfarm business sector, seasonally adjusted annual rates.

What it leaves out

- Which firms, teams or tasks produced the gain
- Whether AI tools played any part in it

Source: US Bureau of Labor Statistics, Productivity and Costs, Third Quarter 2026, Preliminary, released 5 November 2026. Nonfarm business sector, seasonally adjusted annual rates.

What one organisation can measure

- How long one process takes before a new tool goes in
- The same process, measured the same way, a few weeks after

OrVysio records time across applications and processes, so leaders can compare the weeks before a rollout with the weeks after it.
